## STATEMENT OF POLICY

Magdalene College Cambridge acknowledges the important role played by its catering services and is fully committed to complying with the ***Food Information for Consumers Regulations (EU FIC) No. 1169/2011***.

It has been approved and ratified by the Catering Manager and the Executive Chef who has overall responsibility for its implementation.

All managers, chefs, supervisors and staff are responsible on a day to day basis for its implementation.

The policy requires that all food supplied within and by The College is fully compliant with the FIC legislation and the process and procedures laid out within this policy are designed to ensure that the information supplied to all customers is Accurate, Consistent and Verifiable.

Magdalene College Cambridge has committed itself to ensuring that resources, both in staffing and finance, will be available to comply with this policy.

## 1. The legislation

**Food Information for Consumers Regulations (EU FIC) No. 1169/2011**

**Supported by UK law Food Information Regulations 2014 (SI 2014/1855)**

*'sets out the general requirements for information to be provided by food business operators, so that consumers have the information they need to make informed, safe and healthy food choices'* **Food Standards Agency**

Labelling rules in European Directives 2003/89/EC and 2006/142/EC ensure that all consumers are given comprehensive ingredient listing information and make it easier for people with food allergies to identify ingredients they need to avoid. However, following implementation of the **Food Information for Consumers Regulation (EU) No. 1169/2011, allergen labelling rules will be changing in December 2014.**

The new regulation, which was published in October 2011, will build on current allergen labelling provisions for pre packed foods and will introduce a new requirement for allergen information to be provided for foods sold non-packed or pre packed for direct sale. The three year transition period allows businesses to make the necessary changes to their processes and labelling designs in order to meet the provisions laid out in the legislation.

## 2. Outline of the requirements

From **13th December 2014** it will be mandatory for food business operators to inform customers of the 14 key allergens that are in their food. These are detailed in **Fig 1.**

This policy sets out how this is to be achieved.

This is **any** food you sell and includes pre packaged and homemade foods.

The labels on packaging are changing to enable you to identify the allergens more easily. Examples are included in **Fig 2.**

This communication can be verbal or written on the menus. However it is communicated it must be-

- **Accurate**
- **Consistent**
- **Verifiable**

Communication is key- 'if in doubt, leave it out'

### 3. The 14 Allergens

Fig 1- The 14 allergens

# 14

## Allergens

Coming to a food label near you

Food Standards Agency  
food.gov.uk

The way allergens are labelled on prepacked foods is changing because of new regulations. The Food Information Regulation, which comes into force in December 2014, introduces a requirement that food businesses must provide information about the allergenic ingredients used in any food they sell or provide.

There are 14 major allergens which need to be mentioned (either on a label or through provided information such as menus) when they are used as ingredients in a food. Here are the allergens, and some examples of where they can be found:

1

Celery

This includes celery stalks, leaves, seeds and the root called celeriac. You can find celery in celery salt, salads, some meat products, soups and stock cubes.

Cereals containing gluten

Wheat (such as spelt and Khorasan wheat/Kamut), rye, barley and oats is often found in foods containing flour, such as some types of baking powder, batter, breadcrumbs, bread, cakes, couscous, meat products, pasta, pastry, sauces, soups and fried foods which are dusted with flour.

2

3

Crustaceans

Crabs, lobster, prawns and scampi are crustaceans. Shrimp paste, often used in Thai and south-east Asian curries or salads, is an ingredient to look out for.

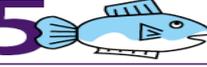

Eggs

Eggs are often found in cakes, some meat products, mayonnaise, mousses, pasta, quiche, sauces and pastries or foods brushed or glazed with egg.

4

5

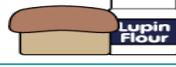

Fish

You will find this in some fish sauces, pizzas, relishes, salad dressings, stock cubes and Worcestershire sauce.

Lupin

Yes, lupin is a flower, but it's also found in flour! Lupin flour and seeds can be used in some types of bread, pastries and even in pasta.

6

7

Milk

Milk is a common ingredient in butter, cheese, cream, milk powders and yoghurt. It can also be found in foods brushed or glazed with milk, and in powdered soups and sauces.

Molluscs

These include mussels, land snails, squid and whelks, but can also be commonly found in oyster sauce or as an ingredient in fish steaks

8

9

Mustard

Liquid mustard, mustard powder and mustard seeds fall into this category. This ingredient can also be found in breads, curries, marinades, meat products, salad dressings, sauces and soups.

Nuts

Not to be mistaken with peanuts (which are actually a legume and grow underground), this ingredient refers to nuts which grow on trees, like cashew nuts, almonds and hazelnuts. You can find nuts in breads, biscuits, crackers, desserts, nut powders (often used in Asian curries), stir-fried dishes, ice cream, marzipan (almond paste), nut oils and sauces.

10

11

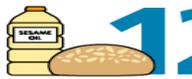

Peanuts

Peanuts are actually a legume and grow underground, which is why it's sometimes called a groundnut. Peanuts are often used as an ingredient in biscuits, cakes, curries, desserts, sauces (such as satay sauce), as well as in groundnut oil and peanut flour.

Sesame seeds

These seeds can often be found in bread (sprinkled on hamburger buns for example), breadsticks, houmous, sesame oil and tahini. They are sometimes toasted and used in salads.

12

13

Soya

Often found in bean curd, edamame beans, miso paste, textured soya protein, soya flour or tofu, soya is a staple ingredient in oriental food. It can also be found in desserts, ice cream, meat products, sauces and vegetarian products.

Sulphur dioxide (sometimes known as sulphites)

This is an ingredient often used in dried fruit such as raisins, dried apricots and prunes. You might also find it in meat products, soft drinks, vegetables as well as in wine and beer. If you have asthma, you have a higher risk of developing a reaction to sulphur dioxide.

## The 14 Allergens in greater detail

**1 – Celery** and products thereof. This includes celery stalks, leaves, seeds and the root called celeriac. You can find celery in celery salt, salads, some meat products, soups and stock cubes.

**2 – Cereals** containing gluten, namely wheat (such as spelt, Khorasan wheat, Kamut), rye, barley, oats and their hybridised strains and products thereof, except:

- a) Wheat based glucose syrups including dextrose
- b) Wheat based maltodextrins
- c) Glucose syrups based on barley
- d) Cereals used for making alcoholic distillates including ethyl alcohol of agricultural origin.

Cereals containing gluten can often be found in foods containing flour, such as some types of baking powder, batter, breadcrumbs, bread, cakes, couscous, meat products, pasta, pastry, sauces, soups, and fried foods which are dusted with flour.

**3 – Crustaceans** and products thereof (for example prawns, lobster, crabs and crayfish) Shrimp paste, often used in Thai and South East Asian curries or salads is an ingredient to look out for.

**4 – Eggs** and products thereof. Often found in cakes, some meat products, mayonnaise, mousses, pasta, quiche, sauces and pastries of foods brushed or glazed with egg.

**5 – Fish** and products thereof, except;

- a) Fish gelatine used as carrier for vitamin or carotenoid preparations.
- b) Fish gelatine or Isinglass used as a fining agent in beer and wine.

Fish is often found in fish sauces, pizzas, relishes, salad dressings, stock cubes and Worcestershire sauce.

**6 – Lupin**, which is a flower but is also found in flour. Lupin flour and seeds can be used in some types of bread, pastries and in some pasta.

**7– Milk** and products thereof (including lactose) except:

- a) Whey used for alcoholic distillates including ethyl alcohol of agricultural origin.
- b) Lactitol Milk is a common ingredient in butter, cheese, cream, milk powders and yoghurt. It can also be found in foods brushed or glazed with milk, and in powdered soups and sauces.

## The 14 Allergens in greater detail (cont)

**8 – Molluscs** including mussels, land snails, squid and whelks but can also be commonly found in oyster sauce or as an ingredient in fish stews.

**9 – Mustard** and products thereof including liquid mustard, mustard powder and mustard seeds. This ingredient can also be found in breads, curries, marinades, meat products, salad dressings, sauces and soups.

**10 – Nuts**, not to be mistaken with peanuts (which are actually a legume and grow underground). This ingredient refers to nuts which grow on trees, such as hazelnuts, cashew nuts, almonds, walnuts, Brazil nuts, pistachios, macadamia nuts (Queensland nuts). Except for nuts used in alcoholic distillates including ethyl alcohol of agricultural origin.

**11 – Peanuts** and products thereof. Often used as an ingredient in biscuits, cakes, curries, desserts, sauces (such as satay sauce), as well as in groundnut oil and peanut flour.

**12 – Sesame Seeds** and products thereof. These seeds can often be found in bread (sprinkled on hamburger buns for example) breadsticks, houmous, sesame oil and tahini. They are sometimes toasted and used in salads.

**13 – Soya** –often found in bean curd, edamame beans, miso paste, textured soya protein, soya flour, or tofu. Soya is a staple ingredient in oriental food. It can also be found in desserts, ice cream, meat products, sauces and vegetarian products. All soybeans except:

- a) Fully refined soybean oil and fat.
- b) Natural mixed tocopherols (E306), natural D-Alpha tocopherols, natural D-Alpha tocopherol acetate, and natural D-Alpha tocopherol succinate from soybean sources.
- c) Vegetable oils derived phytosterol and phytosterol esters from soybean sources.
- d) Plant stanol ester produced from vegetable oil sterols from soybean sources.

**14 – Sulphur Dioxide (sometimes known as sulphites)** -This is an ingredient often used in dried fruit such as raisins, dried apricots and prunes. You might also find it in meat products, soft drinks, vegetables as well as in wine and beer.

## 4. The Processes

The following management process has been introduced to ensure that customers are given **Accurate, Consistent and Verifiable** information.

### 4.1 Procurement

#### Suppliers

The College have written all suppliers to clarify what they are doing in preparation for the change in legislation. **Appendix 1** details the letter.

The College uses reputable suppliers (Please refer to the **College's Food Safety Policy**)

All suppliers are required to comply with the legislation.

#### Change in ingredients/ supplier

If any of the ingredients change (not available, replaced) or a supplier is changed, then the menus and production sheets must be updated to reflect any changes.

### 4.2 Deliveries

All deliveries are checked to ensure that they are labelled with the contents and required allergy information. **Fig 2** below gives an example of a new label example.

Manufacturers are required to highlight any of the key allergens that appear in their food. This may be by highlighting the allergen in **bold**, underlined or in other ways that make these easy to identify.

The allergen information must also be in one place only, ie in the main ingredients, list and no longer in an allergen 'box'.

#### Please Note-

**However as many products have a very long shelf life, there will be a considerable time before all products contain these new labels. It is therefore probable that suppliers will still continue to supply produce with the old style labels. (And you will also have stock within your storage with the old style labels) The law only expects products produced/labelled AFTER the 13<sup>th</sup> December to have the new style label.**

## Accepting or rejecting deliveries of produce:

If the labelling information is not available the person taking delivery will -

Reject and inform one of the 'Allergy Champions'

### OR

If the delivery is required, speak to one of the 'Allergy Champions' who must contact the supplier and ask them to email through the missing information.

Products can only be used if they have the correct labelling. **It is a criminal offence for a supplier not to supply this information.**

## Decanting

Where possible all ingredients should remain in their original packaging with allergen information attached.

If this is not possible a file must be kept in the kitchen with the original labels stored alphabetically as reference. In this instance it is important that the decanted goods must be labelled to ensure they can be identified.

### *Fig 2- Old and new labels*

#### Old

INGREDIENTS: Water, Carrots, Onions, Red Lentils (4.5%) Potatoes, Cauliflower, Leeks, Peas, Cornflour, Wheatflour, Salt, Cream, Yeast Extract, Concentrated Tomato Paste, Garlic, Sugar, Celery Seed, Vegetable Oil, Herb and Spice, White Pepper, Parsley.

#### New

INGREDIENTS: Water, Carrots, Onions, Red Lentils (4.5%) Potatoes, Cauliflower, Leeks, Peas, Cornflour, **Wheat**flour, Salt, **Cream**, Yeast Extract, Concentrated Tomato Paste, Garlic, Sugar, **Celery** Seed, Vegetable Oil (sunflower), Herb and Spice, White Pepper, Parsley.

### 4.3 Preparation

The key to the success of the policy and process is that the person preparing any food item for sale must accurately record all of the ingredients they include in a dish. This must be recorded on the **Food Production Sheet. (Appendix 2)**

A Food Production Sheet must be completed for every dish that is produced (see list below) and also for items that are not homemade but are removed from their original packaging before sale- i.e. sandwiches, sausage rolls, pies, biscuits for tea and coffees, etc

**Appendix 2** details the Food Production Sheet. When completed, these sheets are stored in the Food Production file, which is stored in the kitchen and available for reference for service and production staff. Only the current week's sheets are kept in this file, with the previous week's sheets archived in the catering manager's office.

This sheet **MUST** be completed for each and every food item that is produced in the kitchen.

This includes-

- Soup
- Main courses
- Salads
- Desserts
- Sandwiches
- Buffet items
- Items for use in vending

**Chefs must check every ingredient they put into a dish for the presence of the 14 allergens.**

Chefs must be sure they check thoroughly and if in any doubt, they must check with one of the '**Allergy Champions**'.

If either is in doubt, the item should not be used.

As some products will have very small labels, a magnifying glass will be provided in the kitchen.

#### **Voluntary information – may contain**

There are a number of products that have 'may contain' in their ingredients list. This information is voluntary. If these ingredients are used we will pass this information on to customers.

## **Standardised recipe production sheet**

Where possible standardised recipes will be used.

The standardised recipe production sheet is produced in advance for each dish produced, with blank spaces left for additional or alternative ingredients. These sheets are stored in the kitchen and should be filled in when standard recipes are used.

The standardised recipe production sheets contain specific ingredients to avoid chefs using the wrong product .i.e. '*knorr beef bouillon 2.5kg*' rather than just '*beef bouillon,*' which could refer to a number of products which may contain different ingredients and allergens.

## **Avoiding allergens**

Where possible if an allergen is not vital to a dish and its omission will not affect the integrity of the dish then it will not be used- i.e. Worcestershire sauce, mustard, etc. The executive chef will consider this when producing the standard recipes.

## **Single Ingredients Items**

Where the product is a single ingredient product- such as eggs, milk, cheese, etc and the title of the product is obvious and indicates the allergen, these do not need to be labelled as the item is a sufficient description.

However if this is unclear with items such as latte/ cappuccino (milk) tahini (sesame) edamame beans (soya) etc, these should be labelled.

## **Cross Contamination during Preparation and Service**

Cross contamination of products is not covered in legislation, as the legislation only covers foods that are 'intentionally' added to a dish. However the college has carried out a risk assessment to reduce risk where possible.

Customer information will explain the extent of the law and exemptions and that the College is taking the necessary measures to avoid cross contamination.

There are areas where cross contamination of food is very difficult for the College to control. This is particularly evident in the self-service salad counter.

Servery notices will be displayed explaining that there is a risk of cross contamination in this area and to avoid it if you have a particular allergy.

## **Preparation for future service and re-use**

Where food is prepared for future service, or there is food to be kept following service for future re-use, it is vital that it is labelled to ensure it can be identified at a

later time. This is vital for the identification of allergens. **If there is no identification label, then the item of food must not be used.**

All dishes that are prepared in advance of service must be covered and labelled as follows:

- The name of the dish & the date of production
- **The number of the food production sheet ( this will allow for reference to the allergen information in the food production file)**

#### 4.4. Service & Customer Information

It is vital, prior to any service, that all staff are fully aware of what allergens are present in the food they are serving. The following measures have been introduced to ensure that this happens:

- **Handover from kitchen to Front of House for Service**
- **If in ANY doubt speak to the 'Allergy Champions'**

See communication sections in this policy for further details of these methods.

##### 4.4.1 Cafeteria & Bar Service

###### Pre packaged goods

Signage will be displayed in the servery and bar outlining the changes and showing examples of the old and new style labels.

Customers are advised to check and ask if unclear. (Particularly as there will be a considerable time where there will be a mix of old and new style labels.)

As some product will have very small labels, a magnifying glass will be provided at the point of sale. **Fig 2 Example new labels with Allergens highlighted**

## Static Daily Menus

### Cafeteria breakfast menus

The breakfast menus are static, which means the same menu is provided every day within these areas for this service.

The price lists also act as a menu and will therefore have the allergen labels added to them. Example labels can be observed in **Appendix 3**.

There is no need to change daily, **unless products change**. If any menu items do change, the whole menus/ price list will be replaced.

**A NOTE IS DISPLAYED IN THE SERVERY & BAR SAYING: IF ITEM IS NOT ON THE MENU/PRICE LIST PLEASE ASK ABOUT ALLERGEN INFORMATION- NO INFORMATION DOES NOT MEAN IT DOES NOT CONTAIN ALLERGENS.**

### Bar price lists

In addition to the notice explaining the old and new labels, there is also a bar price list that categorises the drinks for sale into allergen categories- 'these products contain gluten', 'these products contains sulphites', etc

## Daily Changing Menus

### Hot food

The daily menu for Cafeteria Lunch & Dinner is produced every day following the **handover of information. Each of the allergens on the menu is highlighted with the appropriate symbol and text.** (See **Appendix 3**)

The hot counters will have the following menus- (either on the counter or on the pillar next to each counter)

### Soup counter

Daily soup choice

### Hotplate 1

The main course & the vegetarian main course

### Hotplate 2

The vegetables/potatoes & hot dessert

### Hotplate 2-3? (These are static menus and can remain in the servery daily)

Jacket potatoes & baked beans. (Any allergens??? doubtful)

## **Salad bar & cold desserts**

The salad bar & cold dessert menus change regularly and a sign is displayed on the salad bar informing customers to ask if they have allergies.

A notice is also displayed informing customers of the '**high risk of cross contamination between salads during preparation and service**'.

## **Signposting**

If there is not enough space by a counter for the menu then a sign saying '**Please see the menu/price list or allergy information file for allergy information**' is used.

## **Change in menu mid service:**

ANY CHANGES TO THE MENU SHOULD IDEALLY MEAN A NEW MENU IS PREPARED AND DISPLAYED. IF THERE IS ANY DELAY IN THIS TAKING PLACE, A NOTE IN SERVERY IS DISPLAYED ON EACH COUNTER SAYING '**If the item is not on the menu please ask a member of staff for the allergen information in that dish**' NO INFORMATION DOES NOT MEAN IT DOES NOT CONTAIN ALLERGENS.

## **4.4.2 Formal Dining including Formal Halls, Lunches and Dinners, Conferences and Events**

For all meals served at the table the following action is taken:

- If menus are displayed on the table there is a notice at the bottom of each menu saying '**Please speak to a member of waiting staff if you require allergen information**'.
- If there are no menus, then notices are displayed on each table asking customers to '**Please speak to a member of waiting staff if you require allergen information**'.
- If a member of waiting staff are asked about allergens they refer this to one of the 'Allergy Champions' who will speak to the customer and serve them any specific diets.
- The 'Allergy Champion' must speak to the chef and check the food production file for each menu item to ensure that the customer is safe to eat each element of the menu.

Before every service, the service brief including each member of full time staff/'Allergy Champion' are issued with the menu with allergies listed and are briefed on these.

### 4.4.3 Buffet Service

#### With buffet table

For **Buffet service** the following action is taken-

- If menus are displayed on the table there is a notice at the bottom of each menu saying **'Please speak to a member of waiting staff if you require allergen information'**.
- If there are no menus, then notices are displayed on the buffet table asking customers to **'Please speak to a member of waiting staff if you require allergen information'**.
- If a member of waiting staff is asked about allergens they refer this to one of the 'Allergy Champions' who will speak to the customer and serve them any specific diets.
- The 'Allergy Champion' must speak to the chef and check the food production file for each menu item to ensure that the customer is safe to eat each element of the menu.

#### Without buffet table

Where food is served by staff on trays rather than via a buffet table (canapés, bowl food, etc) the following is introduced:-

- A menu is displayed by the entrance with a notice at the bottom of each menu saying **'Please speak to a member of waiting staff if you require allergen information'**.
- All staff are informed to speak to one of the 'Allergy Champions'/ Supervisor if a customer asks them about allergies.
- The 'Allergy Champion'/Supervisor will then discuss the menu with the individual customer. The 'Allergy Champion'/Supervisor will have a copy of the menu including allergens with them during service

### 4.4.4 Tea and Coffee Service

For tea and coffee service:

Biscuits served in individual packaging and customers are referred to the allergens by a notice that says – ***'please refer to the biscuit packaging for allergen information.'***

## 4.5 Communications

### Advance information

There are opportunities to find out what allergies the customers of the college have in advance. The catering department are taking the following steps to communicate with their customers.

### Students

Before students arrive at college, the information they are sent includes asking them whether they have any food allergies. This asks them to contact the Catering Manager/Executive Head Chef via email to discuss their allergies and what the catering department can do to assist.

On arrival at college the student is asked to meet with the catering department and they are given a 'Chef Card' (See Fig 3) or if their allergy is serious the catering department may be able to produce specific meals for them. If the allergy is potentially fatal, then the catering department may decide to purchase guaranteed free from foods, or in extreme cases may advise the student not to eat in the dining room.

### Chef card - Fig 3 the chef card

**Think Allergy**

You can help make sure restaurant staff know about your food allergies when you're eating out. Just type the food(s) you are allergic to into the space below, print the page, then cut out the cards and carry them with you. The next time you're eating out, give one of these handy chef cards to the serving staff.

**Think Allergy**  
I have an allergy to:

Please let me know if my meal contains these ingredients.  
**Just a small amount could make me very ill**  
food.gov.uk/allergy

**Think Allergy**  
I have an allergy to:

food.gov.uk/allergy

**Think Allergy**  
I have an allergy to:

Please let me know if my meal contains these ingredients.  
**Just a small amount could make me very ill**  
food.gov.uk/allergy

To download more cards please visit: <http://multimedia.food.gov.uk/multimedia/pdfs/chefcard.pdf>

The cards are issued to all new students. If they have an allergy they should complete the card and hand it to a member of catering staff to check any particular dishes they would like to enquire about.

When a member of staff is given a chef card they must hand it to either an Allergy Champion or one of the chefs, to check.

### **Formal halls**

The hall booking system allows customers to input details of their allergens. This information is printed out and given to the chefs for production and front of house staff for service.

### **Conference & events**

The conference and events team ask all organiser of events to provide details of guests who have allergies. These details are provided to the catering department as soon as possible so special arrangements can be made if required.

### **Handover for service**

For every service there will be a handover of information on allergens for all menu items produced. This includes all services- cafeteria, functions, high table and conferences.

The chef takes all the completed production sheets and runs through them with the front of house supervisor responsible for the service and menu production. The supervisor signs the sheet to confirm the handover of information and their understanding of the information.

### **Signposting**

If the information is not available at point of sale then signposting is required instructing customers where to find the information or to ask if they are unsure.

### **Customer information:**

The servery signage will include the following information regarding allergens-

- Daily menus with specific allergy information, by dish
- Static price lists and menus with specific allergy information, by dish
- Signposting to where information about allergens is available
- Information about the 14 Allergens and a key to their symbols
- Information about the risk of cross contamination
- Details of the Allergy champions
- Asking customers to ask a member of staff if they are unsure
- Details of where to obtain the 'chef cards'

## **‘Allergy Champions’**

In order to ensure that there are people in the department who have a greater understanding of allergens and the requirements of the legislation, the college are committed to training at least two individuals on each shift, including weekends.

This will ensure that chefs, service staff and customers have someone available during every service for assistance and advice

The following are the allergy champions for the catering department -

- Sam Frost
- Fred Sabalot
- Sabastien Perka
- Laura Griffiths
- Ja Prusinowski

## **Records**

Allergen Menu information is kept for 3 months.

## **Appendix 1- Supplier Letter**

### **Re - The Food Information for Consumers Regulation (EU) No. 1169/2011**

Dear Supplier,

As you are aware there is new legislation governing the sale of foods sold non- packed or pre-packed for direct sale, which is due to come into force in December 2014.

This legislation builds on current regulation and the EU FIC will bring general and nutrition labelling together into a single regulation to simplify and consolidate existing labelling legislation.

In brief the changes are:

- **Any of the 14 allergens that are on the regulatory list will be emphasised on the label**, if they are used as ingredients in a pre-packaged food.
- **Information about allergenic ingredients will be located in a single place**, i.e. the ingredients list on pre-packed food. This means that the voluntary use of the current types of allergy boxes (such as: 'Contains nuts') that provide a short cut to allergen information also given in the ingredients list, will no longer be allowed.
- Currently, loose foods (that can be bought without packaging) don't have to provide information you need about food allergens. However, from 13 December 2014, **information on any of the 14 allergens used as ingredients will need to be provided for these foods.**

This legislation is to make it easier for people with food allergies to identify ingredients they need to avoid.

As part of our preparation for the change in regulations and to ensure due diligence in our supply chain we are asking all of our suppliers for assurance that they are ready for the changes and what they are doing to ensure compliance with the regulations.

We would be grateful if you could reply confirming that we will be ready and fully compliant by the 13<sup>th</sup> December 2014 and outline what steps you are taking to ensure compliance.

We would appreciate your response no later than **XXXXXXX**.

Please contact me on **phone number xxxxxx** if you have any questions?

Kind regards,
